Sort Criteria

Special features include:

- Read-only reporting: Won't alter any of your data
- Floating panels: Design a new report while running another report
- User-input dialog box: Prompts user for input when running report
- Quick report navigating tools & print preview: for easy page viewing prior to printing
- View report: From browser interface
- Export report data to ASCII delimited or HTML formats
- Resolve fields
- True client/server: For DOS, LAN and UNIX platforms
- PPP dial-up remote access: True client/server access for fast results
- On-line help

Edit menu features include:

- Line drawing, graphics, color and font control: Use easy standard tools
- Expression composer: Allows "if" and "else" conditions
- Powerful formula editor: Equivalent to filePro dummy fields
- Alignment: Allows single or multiple field manipulation, field sizing, and left, center, full and decimal justifications

reportPro™ software has built-in supports for the following:

- filePro associated & system maintained fields
- Automatic indexes for fast data access
- memoPad™ text/memo fields
- DOS, LAN, and UNIX version of filePro
- TCP/IP communications via Winsock
- Windows 3.x, Windows 95, and Windows NT platforms
- Windows fonts and printers

A user-friendly Wizard will guide you step-by-step through the creation of your report, or you can skip the Wizard and create your own. Either way, no programming is necessary because reportPro's GUI enables you to point and click your way to a report that would have taken hours to program.
